

# FASTPAP

## PulPaper 2007 was a success

Fastpap participated in PulPaper 2007 exhibition, which was held 5.-7. June in Helsinki. The purpose was to introduce Fastpap and tell people about the service entity that we created by combining the paper industry expertise of Enfoflan, Retool and Fastems.

Visitors were very interested in Fastpap products for cleaning and cross cutting. Obviously, there is great demand for products that can increase production hours and improve both product quality and work safety.

In the discussions we had with visitors, good customer service and high quality of products were emphasized as the main criteria when choosing a supplier. This is a positive message for Fastpap, because these features are the very basis of our quality policy.

We achieved our goals of getting Fastpap and the 8760 philosophy acknowledged.

We had lots of interested visitors on our stand, and received many valuable cooperation contacts, enquiries and contact requests.

**Thanks for all visitors!**
